

CAPABILITIES

Central Geotech is a full-service geotechnical engineering firm. We are currently licensed in several states, but have a national reach, with experience operating in diverse geologies locally and as far away as Afghanistan. We are a CVE Verified Service-Disabled Veteran-Owned Small Business with offices in Alaska and Oregon. We have a proven track record, with 75% or more of our work coming from repeat business or from positive referrals. Embedded in our company culture is a building of trust and empowering staff—allowing each teammate's unique experience across public and private industries to showcase our adaptive solutions for our clients.

CORE SERVICES

- Geotechnical Investigation & Studies
- Site-Specific Seismic Response Analysis
- Seismic Retrofit Analysis
- Shallow and Deep Foundations
- Slope Stability Analysis
- Soils Laboratory Testing
- Compaction Testing
- General Construction Observation
- QA/QC and Special Inspection

FEDERAL GOVERNMENT

Partnering with our trusted prime consultants, we have succeeded in obtaining awards through federal agencies. With experience working for USACE and a tour to Afghanistan in 2011, our principal and owner has unique experience operating within the federal work process.

LOCAL GOVERNMENT

We are a regional company—working inside of our local jurisdictional authorities such as the Municipalities of Anchorage or with the City of Portland, Oregon as a prime contract holder for geotechnical work.

PRIVATE

In addition to our public projects, we continue to succeed with projects large and small in the private sector through national and local developers such as Burger King and Chase Bank.

TEAMING

We have teamed with larger primes such as Coffman and HDR to help make our bids more attractive, then excel in our work together for success after award with mutual clients.

1. EXPLORE

Investigating soil conditions through borings, lab testing, and reporting.

2. DESIGN

Helping clients accomplish goals during permitting and design.

3. BUILD

Special inspections, observations, and testing during construction phases.
